TOLANI COLLEGE OF COMMERCE

(Affiliated to University of Mumbai)

MUMBAI-MAHARASHTRA-400093 DEPARTMENT OF INFORMATION TECHNOLOGY

CERTIFICATE

This is to certify that, Mr. Mohammed Iqram Iqbal Patel Seat No. 34, studying in <u>Bachelor of Science Information Technology</u> has satisfactorily completed the Practical in the subject of **Advanced Mobile Programming** as prescribed by University of Mumbai, during the academic year 2022 - 2023.

Internal Examiner		Co-ordinator
	External Examiner	

Date: College Seal

INDEX

Sr. No	Practical	Title	Date	Sign
1	1	Introduction to Android, Introduction to Android Studio IDE, Application Fundamentals		
2	2	Programming Resources		
3	3	Programming Activities and fragments		
4	4	Programs related to different Layouts		
5	5	Programming UI elements		
6	6	Programming menus, dialog, dialog fragments		
7	7	Programs on Intents, Events, Listeners and Adapters		

PRACTICAL 1

Aim:-

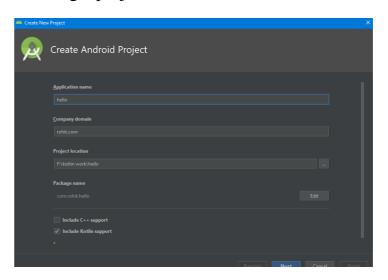

Introduction to Android, Introduction to Android Studio IDE, Application Fundamentals: Creating a Project, Android Components, Activities, Services, Content Providers, Broadcast Receivers, Interface overview, Creating Android Virtual device, USB debugging mode, Application Overview. Simple "Hello World" program.

Description:-

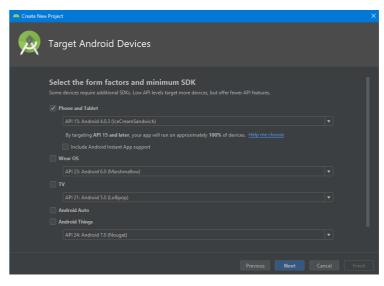

Android Studio is the official integrated development environment for Google's Android operating system, built on JetBrains' IntelliJ IDEA software and designed specifically for Android development. It is available for download on Windows, macOS and Linux based operating systems

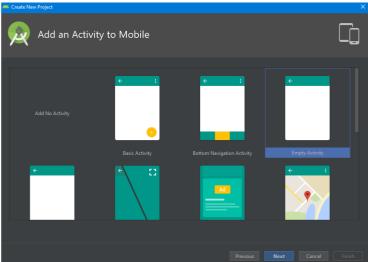

Solution:-

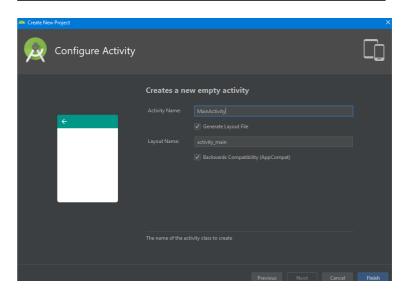

Creating a project:

3 Name: Igram

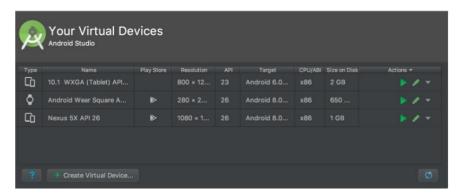

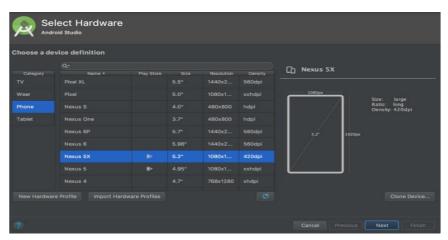

Create and manage virtual devices:

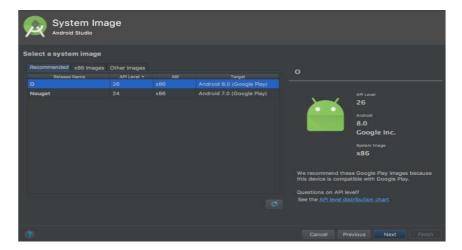

To open the AVD Manager, do one of the following:

4

- Select Tools > AVD Manager.
- Click AVD Manager AVD Manager icon in the toolbar.

4 **5**

Activity_Main.Kt

```
package com.bscit.hello
```

import android.support.v7.app.AppCompatActivity import android.os.Bundle

class MainActivity : AppCompatActivity() {

```
override fun onCreate(savedInstanceState: Bundle?) {
super.onCreate(savedInstanceState)
setContentView(R.layout.activity_main)
    }
}
```

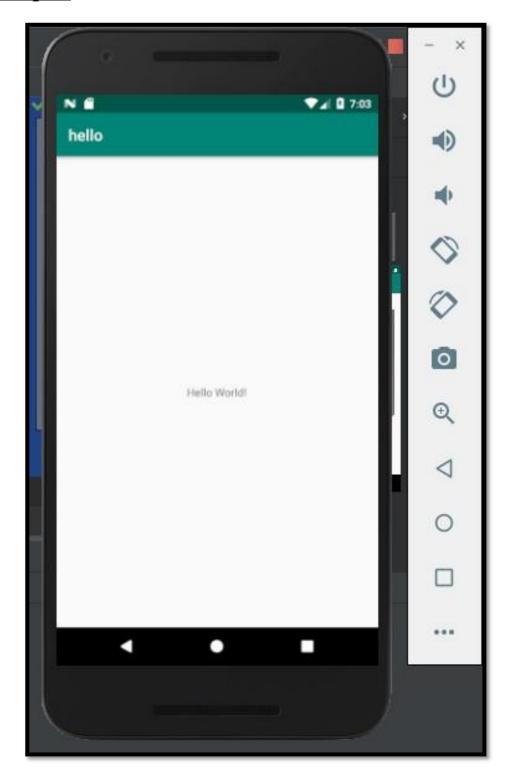

Activity_Main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<android.support.constraint.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:tools="http://schemas.android.com/tools"
xmlns:app="http://schemas.android.com/apk/res-auto"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">
<TextView
android:layout width="wrap content"
android:layout_height="wrap_content"
android:text="Hello World!"
app:layout constraintBottom toBottomOf="parent"
app:layout_constraintLeft_toLeftOf="parent"
app:layout_constraintRight_toRightOf="parent"
app:layout_constraintTop_toTopOf="parent"/>
```

4

 $<\!\!/ and roid. support. constraint. Constraint Layout >$

Output:-

7 Name 1 and 24

Practical 2

<u>Aim:</u> Programming Android Resources: Colour, Theme, String, Dimension, Image

<u>Description:</u> Android Studio helps you add new resources and alternative resources in several ways, depending on the type of resource you want to add.

Solution:

```
activity_main.xml
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout height="match parent"
android:orientation="vertical"
android:background="@drawable/abc"
tools:context=".MainActivity">
<TextView
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:layout_marginLeft="120dp"
android:hint="@string/mystring"
android:textSize="30dp"
android:textColorHint="@color/tx"
app:lavout constraintBottom toBottomOf="parent"
app:layout_constraintLeft_toLeftOf="parent"
app:layout constraintRight toRightOf="parent"
app:layout_constraintTop_toTopOf="parent"/>
<ImageView
android:layout_width="match_parent"
android:layout_height="wrap_content"
app:srcCompat="@mipmap/ic_launcher"
tools:layout editor absoluteY="0dp" tools:layout editor absoluteX="3dp"
android:id="@+id/imageView"
tools:ignore="MissingConstraints" android:layout_alignParentStart="true"
android:layout_alignParentTop="true" android:layout_marginTop="143dp"
android:layout_alignParentLeft="true"/>
```

8

```
</LinearLayout>
strings.xml
<resources>
<string name="app_name">My Application</string>
<string name="mystring">"WELCOME"</string>
</resources>
color.xml
<?xml version="1.0" encoding="utf-8"?>
<color name="colorPrimary">#008577</color>
<color name="colorPrimaryDark">#00574B</color>
<color name="colorAccent">#D81B60</color>
<color name="tx">#FFFFFF</color>
</resources>
MainActivity.kt
package com.example.gkaud.myapplication
import android.support.v7.app.AppCompatActivity
import android.os.Bundle
class MainActivity : AppCompatActivity() {
override fun onCreate(savedInstanceState: Bundle?) {
super.onCreate(savedInstanceState)
setContentView(R.layout.activity_main)
}
```

Output:-

Practical 3

<u>Aim:</u> Programming Activities and fragments: Activity Life Cycle, Life Cycle of fragments.

Description:

A fragment is an independent Android component which can be used by an activity. A fragment encapsulates functionality so that it is easier to reuse within activities and layouts.

Solution:

```
activity_main.xml
```

```
<?xml version="1.0" encoding="utf-8"?>
<android.support.constraint.ConstraintLayoutxmlns:android="http://schemas.android.</p>
com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout height="match parent"
tools:context=".MainActivity">
<TextView
android:layout_width="wrap_content"
android:layout height="wrap content"
android:textSize="90dp"
android:text="Welcome"
android:textColor="@color/colorPrimary"
app:layout_constraintBottom_toBottomOf="parent"
app:layout_constraintLeft_toLeftOf="parent"
app:layout constraintRight toRightOf="parent"
app:layout_constraintTop_toTopOf="parent" />
</android.support.constraint.ConstraintLayout>
```

MainActivity.java

```
package com.example.myapplication;
import android.os.Bundle;
import android.app.Activity;
import android.util.Log;

public class MainActivityextends Activity {
   String msg= "Android: ";
```

11

12

```
@Override
public void onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);
Log.d(msg, "The onCreate() event");
@Override
protected void onStart() {
super.onStart();
Log.d(msg, "The onStart() event");
@Override
protected void onResume() {
super.onResume();
Log. d(\mathbf{msg}, "The \ \mathbf{onResume}() \ \mathbf{event"});
@Override
protected void onPause() {
super.onPause();
Log.d(msg, "The onPause() event");
@Override
protected void onStop() {
super.onStop();
Log.d(msg, "The onStop() event");
@Override
public void onDestroy() {
super.onDestroy();
Log.d(msg, "The onDestroy() event");
}
```

Roll No: 34 Name: Iqram

Practical 4

Aim: Programs related to different Layouts: Linear, Relative, Table.

Description:

A layout defines the structure for a user interface in your app, such as in an activity. All elements in the layout are built using a hierarchy of View and ViewGroup objects. A View usually draws something the user can see and interact with. Whereas a ViewGroup is an invisible container that defines the layout structure for View and other ViewGroup objects.

Solution:

Relative Layout and Linear Layout: -

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayoutxmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout height="match parent"
tools:context=".MainActivity">
<\!Relative Layout
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:layout editor absoluteX="16dp"
tools:layout editor absoluteY="19dp">
<TextView
android:id="@+id/Submit"
android:layout width="wrap content"
android:layout_height="wrap_content"
android:text="TextView"/>
<EditText
android:id="@+id/Username"
android:layout_width="wrap_content"
android:layout_height="48dp"
android:layout_marginLeft="50dp"
android:layout marginTop="100dp"
android:ems="10"
```

4 **15**

```
android:text="Name"
/>
<EditText
android:id="@+id/Password"
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:layout_marginTop="20dp"
android:layout_below="@id/Username"
android:ems="10"
android:inputType="textPassword"
android:text="Password"
android:layout_marginLeft="50dp"
/>
< Button
android:id="@+id/bt1"
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:text="Button"
android:layout_marginLeft="90dp"
android:layout_below="@id/Password"
android:layout_marginTop="20dp"
tools:layout_editor_absoluteX="137dp"
tools:layout_editor_absoluteY="363dp" />
</RelativeLayout>
</LinearLayout>
```

Output: -

16

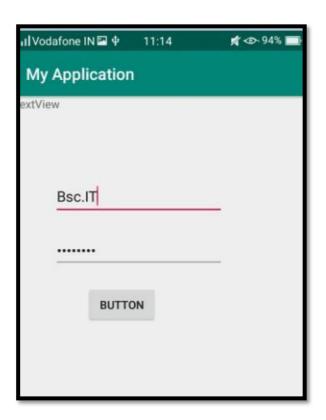

Table Lavout

```
activity_main.xml: -
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout height="match parent"
tools:context=".MainActivity">
<TableLayoutandroid:layout_width="wrap_content"
android:layout height="wrap content"
android:layout_marginLeft="50dp"
android:layout_marginTop="150dp">
<TableRow>
<Button
android:id="@+id/btn1"

PRACTICAL JOURNAL

19

PRACTICAL 5

Aim: Programming UI elements: AppBar, Fragments, UI Components

Description:

Your app's user interface is everything that the user can see and interact with. Android provides a variety of pre-built UI components such as structured layout objects and UI controls that allow you to build the graphical user interface for your app. Android also provides other UI modules for special interfaces such as dialogs, notifications, and menus.

Solution:

MainActivity.kt:

```
package bscit.technobeat
import android.content.Intent
import android.support.v7.app.AppCompatActivity
import android.os.Bundle
import kotlinx.android.synthetic.main.activity_login.*
import kotlinx.android.synthetic.main.activity main.*
import kotlinx.android.synthetic.main.activity_register.*
import rohit.technobeat.R.id.login
import rohit.technobeat.R.id.newaccount
class MainActivity : AppCompatActivity() {
override fun onCreate(savedInstanceState: Bundle?) {
super.onCreate(savedInstanceState)
setContentView(R.layout.activity_main)
login.setOnClickListener{
valintent = Intent(this, LoginActivity::class.java)
// start your next activity
startActivity(intent)
}
newaccount.setOnClickListener{
valintent = Intent(this, RegisterActivity::class.java)
// start your next activity
startActivity(intent)
```

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayoutxmlns:android="http://schemas.android.com/apk/res/android"</p>
xmlns:tools="http://schemas.android.com/tools"
android:layout width="match parent"
android:layout height="match parent"
android:gravity="center_horizontal"
android:orientation="vertical"
android:paddingBottom="@dimen/activity vertical margin"
android:paddingLeft="@dimen/activity_horizontal_margin"
android:paddingRight="@dimen/activity_horizontal_margin"
android:paddingTop="@dimen/activity_vertical_margin"
android:background="@drawable/home"
tools:context=".MainActivity">
<ScrollView
android:id="@+id/login form"
android:layout width="match parent"
android:layout_height="match_parent">
<LinearLayout
android:layout_width="match_parent"
android:layout height="wrap content"
android:orientation="vertical"
android:gravity="center">
<android.support.v7.widget.AppCompatTextView
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:layout marginTop="210dp"
android:alpha="0.7"
android:text="TECHNOBEAT"
android:textColor="#000000"
android:textSize="33dp"
android:textStyle="bold"
tools:layout marginLeft="85dp" />
< Button
android:id="@+id/login"
        style="?android:textAppearanceSmall"
android:layout_width="match_parent"
android:layout height="wrap content"
android:layout_marginTop="16dp"
android:text="Login"
android:background="@drawable/round_button"
android:alpha="0.8"
android:textStyle="bold"/>
< Button
```

4 21

```
android:id="@+id/newaccount"
style="?android:textAppearanceSmall"
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:layout_marginTop="16dp"
android:text="REGISTER"
android:background="@drawable/round_button"
android:alpha="0.8"
android:textStyle="bold" />
</LinearLayout>
</ScrollView>
</LinearLayout>
```

Output:-

4 22

PRACTICAL 6

<u>Aim</u>: Programming menus, dialog, dialog fragments

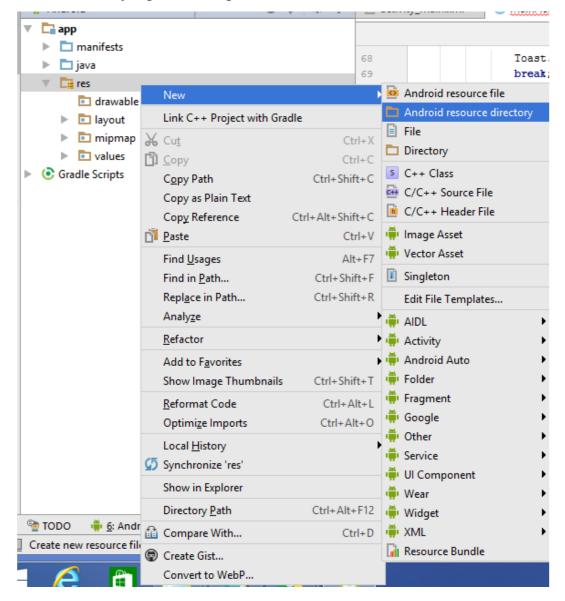

Description:

A dialog is a small window that prompts the user to make a decision or enter additional information. A dialog does not fill the screen and is normally used for modal events that require users to take an action before they can proceed.

Solution:

Menu.xml

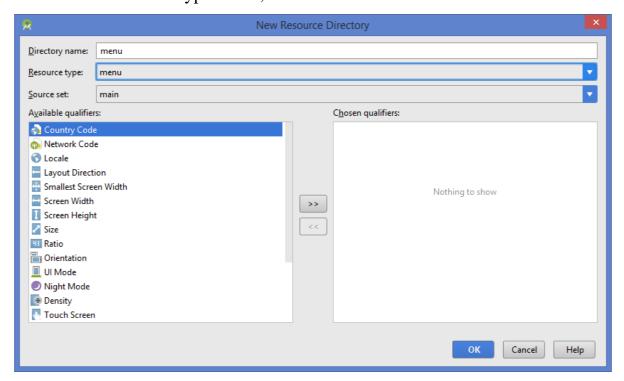

To define the menu_file.xml file, first create a menu directory under res folder. This is done by right clicking on res --> new --> Android resource directory.

23

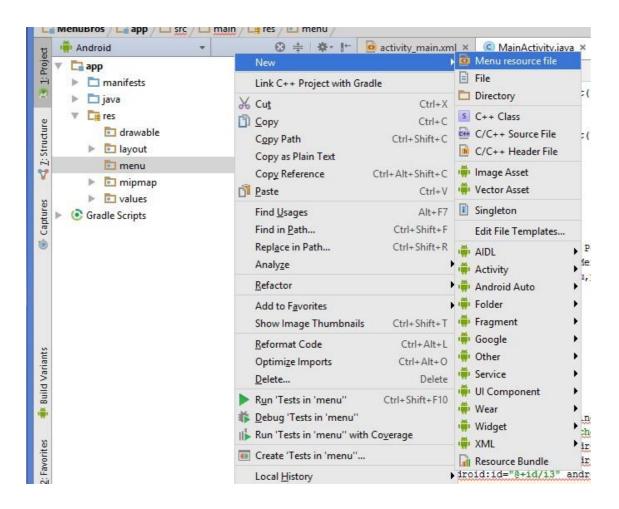

TYBSCIT SEMVI ADVANCED MOBILE PROGRAMMING

Then a new window will appear. Type menu in the directory name and choose menu in the Resource type. Then, click on OK.

A new menu directory would be made under res directory. Add menu_file.xml file in menu directory by right clicking on **menu --> New --> Menu resource file**.

24

Give the name as **menu_file.xml** and click on Ok. The **menu_file.xml** file contains the following tags:

<menu>

It defines a Menu, which is a container for menu items. A <menu> element must be the root node for the file and can hold one or more <item> and <group> elements.

<item>

It creates a MenuItem, which represents a single item in a menu. This element may contain a nested <menu> element in order to create a submenu.

<group>

It is an optional, invisible container for <item> elements. It allows you to categorize menu items so they share properties such as active state and visibility.

4 25

26

MainActivity.java

```
public class MainActivity extends AppCompatActivity {
  @Override
  protected void onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);
  @Override
  public booleanonCreateOptionsMenu(Menu menu) {
MenuInflaterinflater = getMenuInflater();
inflater.inflate(R.menu.menu_file, menu);
    return true;
  }
  @Override
  public booleanonOptionsItemSelected(MenuItem item) {
    //Handle item selection
    switch (item.getItemId()) {
       case R.id.i1:
         //perform any action;
                  Toast.makeText(this, "Menu item is selected",
Toast.LENGTH_SHORT).show()
         return true:
       case R.id.a:
         //perform any action;
Toast.makeText(this, "Menu submenu a is selected", Toast.LENGTH SHORT).show()
         return true;
       case R.id.b:
         //perform any action;
Toast.makeText(this, "Menu sub menu b is selected", Toast.LENGTH SHORT).show()
         return true:
       default:
         return super.onOptionsItemSelected(item);
}
menu file.xml
<?xml version="1.0" encoding="utf-8"?>

Practical 7

<u>Aim:</u> Programs on Intents, Events, Listeners and Adapters: The Android Intent Class, Using Events and Event Listeners

Description:

Events are a useful way to collect data about a user's interaction with interactive components of Applications. Like button presses or screen touch etc. The Android framework maintains an event queue as first-in, first-out (FIFO) basis. You can capture these events in your program and take appropriate action as per requirements.

Solution:

INTENTS

MainActivity.java

```
package com.example.intentapp;
import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.EditText;
public class MainActivityextends AppCompatActivity {
  @Override
protected void onCreate(Bundle savedInstanceState) {
super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);
public void showntext(View view)
EditText ed=(EditText)findViewById(R.id.text1);
    String msg=ed.getText().toString();
    Intent in=new Intent(this,newpage.class);
in.putExtra("my key", msg);
startActivity(in);
}
```

31

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayoutxmlns:app="http://schemas.android.com/apk/res-auto"</pre>
xmlns:tools="http://schemas.android.com/tools"
xmlns:android="http://schemas.android.com/apk/res/android"
android:layout_width="match_parent"
android:layout_height="match_parent"
tools:context=".MainActivity">
<EditText
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:hint="Enter value"
android:id="@+id/text1"/>
< Button
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:id="@+id/btn"
android:text="click"
android:onClick="showntext"/>
</LinearLayout>
```

Add a new layout resource file

newpage layout.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
android:layout_height="match_parent">
<TextView
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:text="New Text"
android:id="@+id/text2"
android:textSize="20dp"
tools:ignore="MissingConstraints"/>
</androidx.constraintlayout.widget.ConstraintLayout>
```

Add a new empty activity

newpage.java

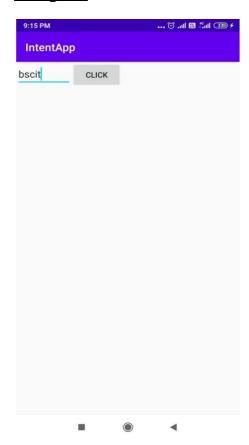

package com.example.intentapp;

32

```
import androidx.appcompat.app.AppCompatActivity;
import android.os.Bundle;
import android.widget.TextView;

public class newpageextends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_newpage);
        TextView tv1=(TextView)findViewById(R.id.text2);
            String myval=getIntent().getExtras().getString("my key");
            tv1.setText("Value=" +myval);
        }
}
```
